(54) Title: A DEVICE FOR CUTTING SANITARY CONTAINERS, IN PARTICULAR SACKS, BAGS, AND/OR POUCHES FOR STOMAS

(57) Abstract: A device for cutting sanitary containers, in particular sacks, bags, and/or pouches for stomas, comprises a structure (2) provided with a housing portion (3). The housing portion (2) has a cutting plate (4, 10) whereon is set down a container to be cut. The cut is accomplished by cutting means (23) associated with the structure (2). The cutting means (13) are adapted to cut a structural portion of the container, defining its inlet. The cutting means are further provided with adjusting means (17) to determine the amplitude and the shape of the inlet of the container being prepared, in relation to the shape and the dimensions of the stoma of a patient.

For two-letter codes and other abbreviations, refer to the "Guidance Notes on Codes and Abbreviations" appearing at the beginning of each regular issue of the PCT Gazette.
